Carbon Reduction Statement

At Lawmed we recognize the urgent need to address the global climate crisis and are committed to doing our part to reduce our carbon emissions. We believe that transitioning to a low-carbon economy is essential to securing a sustainable future for ourselves and future generations.

As part of our commitment to carbon reduction, we will undertake the following actions:

- Measure and report our carbon footprint: We will conduct a comprehensive assessment of our carbon emissions across our operations and supply chain, and regularly report our progress in reducing our carbon footprint.
- Set ambitious emissions reduction targets: We will set science-based targets for reducing our carbon emissions in line with the Paris Agreement's goal of limiting global warming to 1.5°C above pre-industrial levels.
- Adopt low-carbon technologies and practices: We will invest in and implement low-carbon technologies and practices, such as renewable energy, energy efficiency, circular economy principles, and sustainable transportation.
- Collaborate with stakeholders: We will work closely with our suppliers, customers, employees, and other stakeholders to promote a low-carbon economy and develop innovative solutions to reduce our collective carbon footprint.
- Advocate for policy change: We will advocate for policy changes at the local, national, and international levels to accelerate the transition to a low-carbon economy.

Net Zero Commitment:

Lawmed is committed to achieving net zero emissions by 2050. We will regularly report on our progress towards achieving net zero and engage with stakeholders to promote transparency and accountability.

John Black
Commercial Director.
